

MacroView Advanced Office Integration (AOI)

Are you wanting to take advantage of the versioning capabilities of SharePoint, but frustrated by the version control experience as you close a document that you have opened from SharePoint into Microsoft Word and edited? Have you lost days of edit activity when you accidentally opted to Discard Checkout?

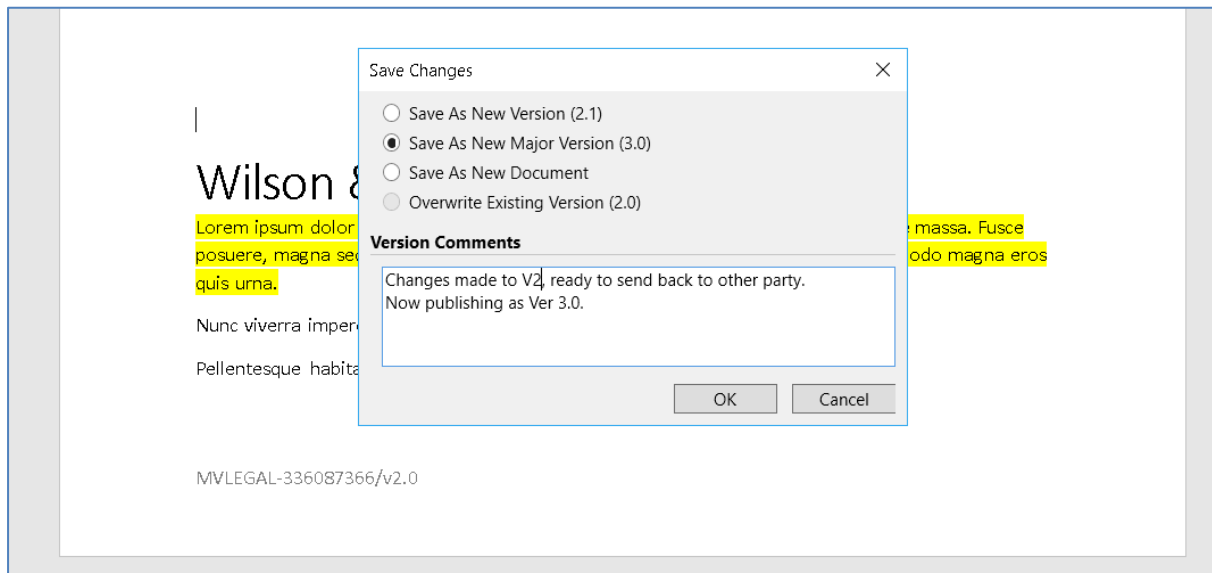

MacroView AOI is an optional module available for MacroView DMF that provides a version control experience in Microsoft Word that is intuitive and safe.

Intuitive Version Control Options On Closing a Word Document

As you close a Word document that you have opened from SharePoint and edited, MacroView AOI will display an intuitive menu of version control options..

- The version control options include saving as a new document, saving as a new version and replacing existing versions.
- MacroView AOI prompts you to save unsaved changes. If no changes have been made since opening, the document will close immediately and any check-out discarded.
- MacroView AOI respects the level of versioning that has been defined in SharePoint – e.g. *Major Versions Only* or *Major and Minor (Draft) Versions*.
- When saving to a *Major Versions Only* library MacroView AOI enables replacement of a current Major version.
- When creating a new version MacroView AOI prompts you for a version comment. When replacing an existing version you can edit existing comments for that version. These comments are visible when you right-click the document and choose Version History.
- MacroView does NOT require the document to be checked out. If the document is checked out, MacroView AOI will automatically check it in with the version option that you choose.
- MacroView AOI requires MacroView UDN. The version chosen from the MacroView AOI menu will be used to update the Document Reference in the footer from */v2.0* to */v3.0* in the screen shot below.

Supports SharePoint Online and On-premises SharePoint

MacroView requires MacroView UDN to be installed and active.

MacroView AOI runs with Microsoft Word 2010 and later.

It supports Office 365 SharePoint Online and SharePoint Server 2010 and later.
